

TAMILVEL B

Power BI Developer | Data Analyst | Power Apps Developer

Tamil Nadu, India (Open to Relocation — Bengaluru, Chennai, Coimbatore) | tamilvel98425@gmail.com | +91 99524 89998 | <https://linkedin.com/in/tamilvel-b-059301240>

PROFESSIONAL SUMMARY

Power BI Developer and Data Analyst with 4+ years of experience across healthcare, telecom, and manufacturing sectors, designing enterprise-grade dimensional data models and translating complex, multi-source datasets into decision-ready dashboards for senior leadership. Skilled in advanced DAX, Power Query (M), SQL-backed tabular modeling, and star-schema design, with working knowledge of Composite/DirectQuery models and Row-Level Security. Extends BI delivery with Power Apps and Power Automate to eliminate manual, error-prone processes end to end. Known for owning the full analytics lifecycle — requirement gathering, data validation, model design, and stakeholder-ready reporting — while training teams to adopt self-service BI and Power Platform tools.

CORE COMPETENCIES

Business Intelligence & Power BI: Power BI Desktop & Service, Advanced DAX (CALCULATE, RANKX, TREATAS, USERRELATIONSHIP, Time Intelligence), Star-Schema & Tabular Modeling, Composite/DirectQuery Models, Row-Level Security (RLS), Drill-through & Drill-down, Custom Visuals, KPI Dashboard Design

Data & Databases: SQL Server (SELECT, JOIN, GROUP BY, Subqueries, Aggregations), Data Validation & Reconciliation

Data Preparation: Power Query (M Language), Query Folding, Multi-Source Consolidation, Data Cleaning & Transformation

Programming & Automation: Python (Pandas, NumPy, OpenPyXL), Excel VBA Macros, Power Automate & Power Automate Desktop, Advanced Excel (Power Pivot, Power Query, Formulas)

Power Platform: Power Apps (Canvas, Power Fx, Delegation-Aware Design), Power Automate, SharePoint Integration

Delivery & Stakeholder Skills: Requirement Gathering, Stakeholder Communication, Trend & Variance Analysis, Process Documentation, End-User Training

PROFESSIONAL EXPERIENCE

MIS Executive | Connected Value Health Solutions Inc. — Coimbatore

Jul 2025 – Mar 2026

- Designed and built HR and operational KPI dashboards on star-schema data models, authoring DAX measures (CALCULATE, RANKX, time intelligence) and drill-through pages that gave senior leadership real-time, self-serve visibility into workforce and operational metrics.
- Built a Power Apps solution to capture employee working hours across multiple time zones, resolving timezone calculation conflicts through a text-based date-storage approach, to directly support client billing operations.
- Engineered Power Query transformations to extract, clean, and consolidate data from multiple sources into a single reporting model, cutting repetitive manual preparation and improving reporting turnaround.
- Developed Python (Pandas, OpenPyXL) scripts to clean, consolidate, and validate datasets, strengthening data accuracy and integrity across all reporting outputs.
- Delivered monthly and ad-hoc analytical reports on productivity, workforce utilization, and attendance trends that informed resourcing decisions for leadership.

MIS Executive | Vodafone Idea Ltd. (via Qess Corp) — Coimbatore · Remote

Mar 2025 – Jun 2025

- Owned end-to-end daily reporting across 5 business units using advanced Excel and Power Query, maintaining a single consolidated dashboard that delivered consistent revenue and target-achievement figures to regional managers every cycle.
- Built a VBA macro to validate incoming data for errors and duplicates, automatically split the master file into 5 business-area files, and route each via Outlook to the relevant managers — eliminating manual splitting, routing, and associated handling errors.
- Replaced fragmented, multi-location spreadsheets with structured Power Query dashboards, improving reporting consistency and reducing data-preparation time cycle over cycle.

MIS Executive | Mahendra Next Wealth IT Pvt. Ltd. — Salem

May 2022 – Mar 2025

- Developed and maintained automated KPI dashboards and management reports for 15+ concurrent projects, integrating multi-source data via Power Query, SQL, and Excel to support executive goal tracking and decision-making.
- Built the MIS Activity Log application in Power Apps (Microsoft Teams) for a ~10-member team, enabling daily report assignment with defined turnaround times (TAT), per-task time capture, and productivity tracking that improved team output.
- Built an Operations KPI monitoring app in Power Apps and developed Expiro Trax, an automated renewal-reminder system with tiered escalation logic and Power Apps-based data write-back.
- Deployed a Power Automate Desktop bot to download and process 40+ files per cycle, saving approximately 40 minutes per run and eliminating manual handling errors.
- Led Power Platform training sessions across multiple project teams, accelerating tool adoption and reducing dependency on manual Excel-based processes.

Recognition: *Rising Star of the Year (2023) · All-Rounder of the Year (2024)*

KEY PROJECTS

IPL Cricket Analytics Platform | *Power BI · SQL Server · DAX · Power Query · Personal Project*

- Business problem: leadership-style cricket analytics (batting, bowling, match, and venue insight) required a scalable model capable of handling ball-by-ball granularity without sacrificing dashboard performance.
- Solution: designed a SQL Server star-schema data warehouse (12 fact/dimension tables) at ball-by-ball grain, then built a Power BI Composite Model — DirectQuery for the high-volume fact table and Import mode for dimensions — to balance performance with interactivity.
- Authored 58+ DAX measures across batting, bowling, match, season, and venue categories, applying advanced patterns including TREATAS (dimension bridging), REMOVEFILTERS (bowling context), USERRELATIONSHIP (dismissal logic), and ADDCOLUMNS + SUMMARIZE as a DirectQuery-safe grouping pattern.
- Outcome: a multi-page dashboard with custom visuals, KPI cards, and drill-through navigation, including team-based Row-Level Security roles designed and validated in Power BI Desktop, fully documented as a technical reference covering data model, ETL logic, and measure library.

HR & Operational KPI Dashboards | *Power BI · DAX · Power Query · Data Modeling · Connected Value Health*

- Business problem: leadership lacked a consolidated, self-serve view of HR and operational metrics across departments.
- Solution: built multi-page dashboards on star-schema models with defined relationships and hierarchies, authoring DAX measures for headcount, attrition, attendance, and target-vs-achievement variance, plus WoW/MoM/YoY time-intelligence trends.
- Outcome: added drill-through pages, slicers, and KPI cards enabling department- and metric-level self-serve analysis for stakeholders.

MIS Activity Log App | *Power Apps · Microsoft Teams · SharePoint · Mahendra Next Wealth*

- Business problem: a ~10-member team relied on manual spreadsheet tracking for daily report assignment, giving team leads no real-time visibility into workload or output.
- Solution: built a Canvas Power Apps application embedded in Microsoft Teams with TAT-based daily report assignment, gallery/form-driven data entry, and Patch/Filter/LookUp logic against a SharePoint backend.
- Outcome: replaced manual tracking with a real-time system giving team leads live visibility into productivity and bottlenecks.

Expiro Trax — Automated Renewal & Escalation System | *Power Automate · SharePoint · Power Apps · Excel · Outlook · Mahendra Next Wealth*

- Business problem: renewal deadlines (3 per team member) were tracked manually, leading to missed renewals and repeated manual follow-up.
- Solution: built a daily scheduled Power Automate flow that scans SharePoint records and applies tiered escalation — alerts to Team Leads at 15 days to expiry and Managers at 7 days, each with a filtered Excel attachment — plus automated status write-back on renewal.
- Outcome: eliminated missed renewals and saved 2+ hours per week of manual coordination effort.

Report Automation Bot | *Power Automate Desktop · VBA · JavaScript · Mahendra Next Wealth*

- Business problem: a recurring client report required manual login, navigation, and file download each cycle, followed by manual cleanup.
- Solution: automated the download workflow using Power Automate Desktop click-element recording (supplemented with AI-assisted JavaScript for complex interactions), triggering a VBA macro to clean and finalize the report output.
- Outcome: saved approximately 40 minutes per run and removed manual handling errors.
